🧠 SKILLS

- Javascript
- Typescript
- Python
- PHP
- GO
- Ruby on Rails
- React
- Vue
- Angular
- Node
- Nest.js
- Express.js
- Django
- Flask
- FastAPI
- Laravel
- Symfony
- AWS
- Flutter
- Docker
- Azure
- GCP
- SQL
- PostgreSQL
- MongoDB
- Firebase

🎓 EDUCATION

Bachelor's Degree in Computer Science,
University of Belgrade
2011 – 2014

📄 SUMMARY

Senior Full Stack Developer with 10+ years of experience building secure FinTech, SaaS, blockchain-adjacent, data, and cloud-native platforms. Experienced in digital payment workflows, tokenized-asset style transaction systems, compliance-aware onboarding, KYC/KYB review flows, audit trails, API-first integrations, and analytics for high-trust business operations. Strong with TypeScript, React, Node.js, Python, Go, Ruby on Rails, PostgreSQL, MongoDB, AWS, Azure, GCP, and Docker. Known for pragmatic architecture, readable code, direct client communication, and reliable production ownership.

👛 WORK EXPERIENCE

Self Employed, Senior Full Stack Developer

01/2025 – Present

- Built and maintained fintech platforms supporting cryptocurrency transactions across multiple blockchain ecosystems.
- Developed backend blockchain transaction services using Soroban wallet integrations for secure crypto transaction processing on the Stellar/Soroban ecosystem.
- Integrated multiple blockchain wallet providers including Phantom, Solana wallets, and other Web3 wallet solutions into frontend applications for wallet connectivity, authentication, and transaction execution.
- Implemented end-to-end crypto transaction flows including wallet connection, transaction signing, blockchain interaction, and payment processing.
- Worked with Web3 technologies, smart contract interactions, blockchain APIs, and decentralized finance (DeFi) transaction handling.
- Experienced in blockchain-based authentication, wallet management, and secure transaction architecture for modern fintech platforms.

Scalo, Senior Full-Stack Developer

05/2021 – 01/2025 | Wrocław, Poland

- Built enterprise software in a consulting environment for clients needing reliable cloud platforms, automation, AI/data services, and secure internal tools.
- Delivered React and TypeScript portals for operational dashboards, approval workflows, data review screens, time tracking, and exception handling used by distributed teams.
- Developed Node.js, Go, Python/Django, and MongoDB services for workflow automation, API orchestration, Google integrations, and algorithm performance tracking.
- Modeled workflow states, audit history, data validation, and review queues in a way that maps well to settlement operations, compliance checks, and institutional transaction monitoring.
- Improved delivery quality through code reviews, practical estimates, clear client communication, and architecture choices focused on security, supportability, and production reliability.

Scalo, Full Stack Developer

06/2019 – 04/2021 | Wrocław, Poland

- Developed client-facing web applications where accurate data presentation, responsive UI behavior, and dependable backend workflows were central to daily business operations.
- Converted Figma designs into production Vue.js, Nuxt.js, React, TypeScript, Redux, and Tailwind CSS pages, keeping the implementation close to design while preserving reusable component structure.
- Implemented RESTful APIs and application features with Ruby on Rails and Laravel for reporting, message-board, order-status, and DTC eCommerce workflows.
- Added Vue Test Utils and Cypress coverage around critical UI paths, reducing regressions during release changes.
- Supported Jira-based delivery by clarifying acceptance criteria, triaging defects, and keeping production fixes moving alongside larger feature work.

Kultify, Software Developer

09/2016 – 05/2019 | Nürnberg, Germany

- Maintained and improved a React.js client portal that helped organizations collect employee feedback, understand workplace needs, and support retention initiatives.
- Built survey, feedback, and reporting workflows in React.js, improving reusable view patterns, data-entry behavior, and long-term maintainability.
- Created middleware connecting React views with a proprietary model framework, making the product easier to extend without rewriting core business logic.
- Used jscodeshift codemods to replace deprecated APIs and modernize JavaScript syntax safely across the application.
- Established practical frontend guidelines for readability, testability, code consistency, and peer review quality.

TNation, Web Developer

09/2014 – 07/2016 | Belgrade, Serbia

- Developed responsive mobile web applications for enterprise clients that required reliable delivery across QA, design, backend, and frontend teams.
- Built AngularJS applications with HTML5, CSS3, LESS, Bootstrap, RequireJS, Jasmine, Karma, and Protractor, creating a structured UI development and testing workflow.
- Defined RESTful API contracts for frontend consumption, aligning browser behavior, validation rules, and backend integration points before implementation.
- Improved cross-device usability, page behavior, and automated test coverage while sharing knowledge across .NET, QA, design, and frontend teams.
